A

C

CANBUS

The schematic diagram illustrates a CANBUS interface circuit. It features a CAN RS input connected to a 3V3 supply through a 10k resistor (R44). The input is also connected to a CAN1_TX and CAN1_RX input. A test point (TP7) is located near the input. The input signal is processed by a U4 SN65HVD231QDR transceiver. The transceiver's VCC is connected to a 3V3 supply, and its GND is connected to ground. The transceiver's CANH and CANL outputs are connected to a CAN_P and CAN_N output. A feedback loop (FB1) is connected between the CANH and CANL lines. A capacitor (C28) is connected between the CANH and CANL lines. A capacitor (C29) is connected between the CANH and CANL lines. A transformer (T1) is connected between the CANH and CANL lines. A component (P1) is connected between the CANH and CANL lines. A resistor (R43) is connected between the CANH and CANL lines. A diode (D26) is connected between the CANH and CANL lines. Two capacitors (C30 and C31) are connected between the CANH and CANL lines.
